

AmnioWrap²TM

Human Amnion/Chorion Tissue Allograft

Made by Nature, Backed by Science

AmnioWrap² is a natural, minimally manipulated structural allograft, intended for homologous use as a protective covering for soft tissue wounds.

BIORETAIN[®]
The Power of Six

Amniotic Tissue Works!

Quote from CMS:

"The addition of Skin Substitutes or Cellular or Tissue Based Products (CTPs) to certain wounds may afford a healing advantage over dressings and conservative treatments when these options appear insufficient to affect complete healing."

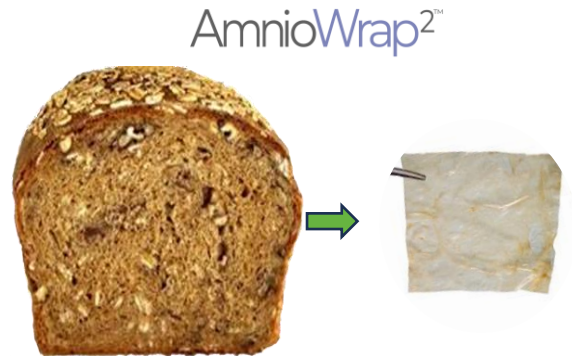

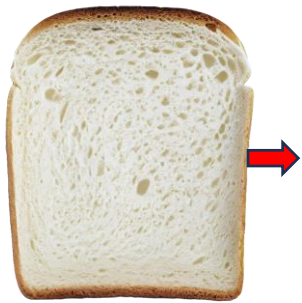

<https://www.cms.gov/medicare-coverage-database/view/article.aspx?articleId=54117>

BUT...

BUT, are all they all equal?

A: **No.** There is a difference in retained structure and growth factor components, which is analogous to white versus wheat bread:

Commercially processed

- Very uniform unnatural white
- ✗ Low nutrient density
- ✗ No retained ingredient structures

- Less uniform, natural color
- ✓ High nutrient density
- ✓ Retains beneficial structures

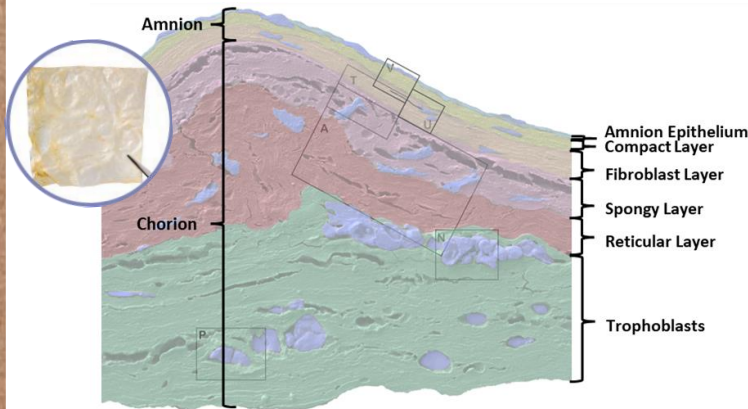

The Power is in the Process!

BIORETAIN[®]
The Power of Six

A: The patented **BioRETain** process preserves the **natural** integrity of the AmnioWrap² placental tissue/components critical to the wound care healing process.

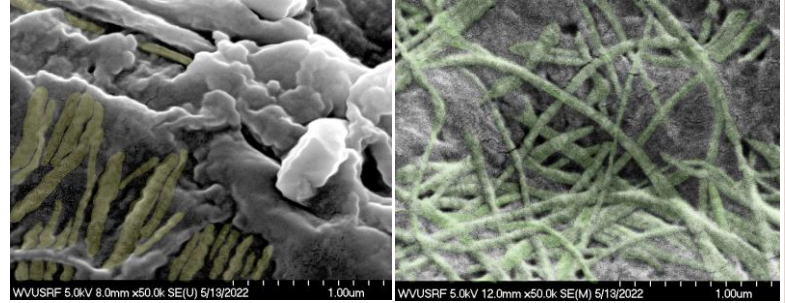

BioRetain vs. delaminated... Collagen!

AW2 Magnified and Colored Cross Section

The **REtained** intermediate layer keeps natural collagen structure intact which other processing methods unnaturally shorten.

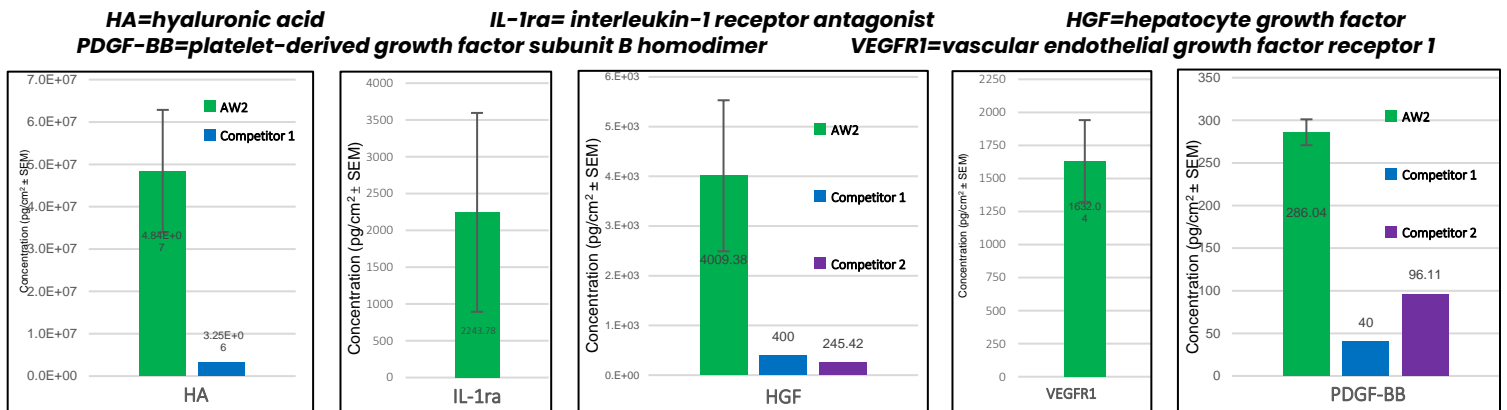

Air-dried: disrupted

What's in Your Placental Product?

Versus competitive products that are manipulated using harsh manufacturing processes, the BioRetain process results in tissue exhibiting higher concentrations of natural components:

Comparative Studies?

Background

A retrospective study was conducted comparing the effectiveness of retention-processed (BioRetain® and AmnioWrap²) and a de-laminated, then re-laminated product in managing diabetic foot ulcers (DFUs).

Findings:

There are distinct advantages of BioRetain processed product in terms of **application efficiency** and **wound size reduction**.

AW2 demonstrated marginally higher expected Percent Area Reduction (xPAR) over 12 weeks demonstrating effectiveness in managing wound size.

AW2 required fewer application vs. Epifix to achieve the same size reduction.

AW2's reduced application frequency enhances patient comfort by lessening the need for repeated treatments.

"Data signifies AW2 is a more cost-effective and resource-efficient approach in clinical settings, positioning it as a more advantageous option in many clinical cases."

Epifix® and Purion® are Trademarks of MIMEDX Group, Inc.

Service System:

Our Relationship Manager Team will make working with Venture Medical Easy by Coordinating:

New Account Sign-Up:

Email accounts@venturemedical.com for New Account Setup

Onboarding

Your Relationship Manager will orient you to the Venture OneView portal.

Insurance Verification

IVRs are easily submitted & tracked online.

Reimbursement Support

Support for prior-authorizations, appeals and denials.

Revenue Cycle Management

Communicate with your Relationship Manager through our portal on Claims, Reimbursement, and Payments.

Go from multiple spreadsheets and systems to ONE VIEW of IVRs, products, orders, claims, reimbursements, invoices and payments!

About Us:

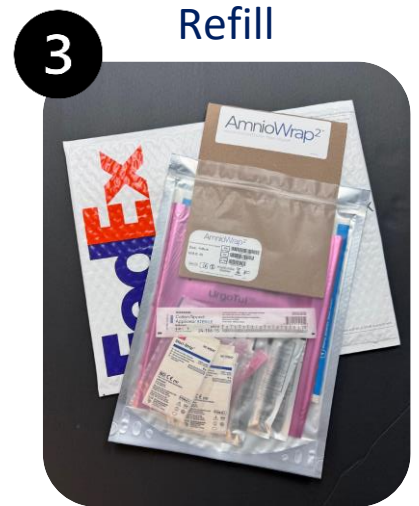

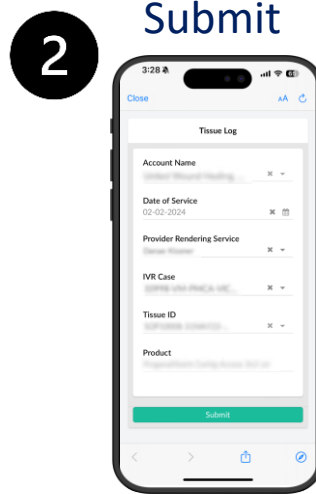

Established in 2009, Venture Medical has pioneered novel solutions in wound care including biofilm management, imaging, diagnostics, and biologic allografts, while expanding access to therapies in multiple care environments.

Secure access for providers, billers, AP and managers:
